EDITO

Last year's successful edition encouraged us to once again organize this conference. This year the meeting will be held under the auspices of EORTC, the French Neuro-Oncology Group (ANOCEF) and the French Society of Neuro-Surgery are partners of this event.

This initiative brings the multidisciplinary approach needed to develop Brain Metastases projects across several tumor types and disciplines such as breast cancer, lung cancer, melanoma, imaging, radiation oncology, pathology and molecular. It is expected that this cross-sectional meeting will stimulate innovative and insightful research in a collaborative environment and improve the standard of care and methodology of clinical research.

The overarching goal of the meeting is to generate a set of research priorities that would stimulate integrated scientific and clinical investigation directed at understanding basic processes of Brain Metastases and translating such insights to clinical care. The organizing committee hopes that this meeting will provide an exceptional opportunity for you to share your collective expertise ranging from basic science to new treatments in order to facilitate ongoing studies and lay the foundation for future collaborative projects.
